EDUCATION

University of Michigan (Ann Arbor), USA

August 2021 - Present

Ph.D. in Robotics, GPA: 4.0/4.0

University of Michigan (Ann Arbor), USA

August 2019 - April 2021

M.S. in Robotics, GPA: 4.0/4.0

Shanghai Jiao Tong University, China

September 2015 - June 2019

B.E. in Nuclear Engineering and Technology, GPA: 86.4/100

Stanford University, USA

June 2017 - August 2017

Intensified Study in Computer Science (Summer Session), GPA: 4.0/4.0

RESEARCH EXPERIENCE

Development of Co-Adaptive Controller for Upper Exoskeletons

Oct 2022 - Present

Advisor: Prof. Leia Stirling, University of Michigan

Research Assistant

- ▶ Developed experiment-based data-driven method to personalize EMG-based controller for different users in the pick-and-place task.
- ▶ Applied reinforcement learning to develop co-adaptive EMG-based controller for upper-extremity exoskeleton to mitigate dynamic changes of EMG.

EMG Biofeedback Helps the Usage of Upper Exoskeletons

Sep 2021 - Oct 2022

Advisor: Prof. Leia Stirling, University of Michigan

Research Assistant

- ▶ Designed visual and haptic biofeedback for EMG-based upper-extremity exoskeleton to investigate the effects of biofeedback on people’s usage of the device (potentially accelerate the adaptation and increase the performance).

- Understood how naive users learn to use exoskeletons to maintain the task accuracy, while at the same time trying to reduce the muscle efforts.

Human Perception of Exoskeleton Actuation Timing

May 2020 - August 2021

Advisor: Prof. Leia Stirling, University of Michigan

Research Assistant

- Designed human subject study to measure human perception of changes in exoskeleton actuation timing, which gives information on people's comfort, coordination, and trust in using devices, as well as providing foundations on how the sensorimotor system detects the exoskeleton behavior changes.
- Developed boot algorithm to present desired torque timing during each gait cycle.
- Designed an Android app to minimize potential distractions that could influence people's perception, and developed a Python GUI to control the device following pre-determined human study protocols.

Instability phenomenon on Soft Manipulator

February 2018 - July 2019

Advisor: Prof. Guoying Gu, Shanghai Jiao Tong University

Research Assistant

- Investigated a common instability phenomenon existed in soft continuum manipulator and studied the effect of Length to Diameter Ratio (LDR) on manipulators' workspace through Finite Element Analysis.
- Designed and fabricated a novel two-section soft continuum manipulator combining three fiber-reinforced actuators in each section and carried out experiments to validate simulation results.
- Proposed the concept of Instability and a new measure variable, workspace ratio, to analyze soft manipulator's performance regarding to its workspace, which can guide design for future application.

AWARDS AND HONORS

Robotics PhD Fellowship	2021
Rackham International Student Fellowship (nominated)	2020
Excellent Undergraduate in Shanghai	2019
Honors degree for outstanding scholastic and scientific research performances in SJTU	2019
Design Excellent Award – 2 nd Place for Capstone Design Project EXPO	2019
Hongyi Overseas Research Scholarship (Top 10%)	2018
3 rd Prize in the 4 th Qian Xuesen Innovative Competition in SJTU	2017
1 st Prize NPIC Scholarship	2016, 2017
Excellent Student of SJTU selected with overall performance (Top 5%)	2016, 2017
2 nd Prize NPIC Scholarship	2015

OTHERS

Membership	IEEE Student Member, 2021 EMBS Graduate Student Member, 2021
Reviewer	IEEE Robotics and Automation Letters (RA-L), 2022 IEEE Transactions on Neural Systems and Rehabilitation Engineering (TNSRE), 2022
Outreach	Discover Engineering Camp, 2022 WISE Camp, 2022 Wines Elementary School, 2022 Allen Elementary School Robotics Visit, 2023
